

EXA STANDARD SOLAR CELLS & STRINGS PACKING SPECIFICATIONS

Product packing markings and labels used:

ESD

GLASS

SENSITIVE TO LIGHT:

CLEAN ROOM WARNING

G-TRACKING DEVICE USED IN EACH PACKAGE (25G):

Depending on the size of the panels and/or cells/strings an appropriate case is used, normally Pelican anti-shock cases like the Pelican Air 1625, but in some cases like large solar arrays a strong wooden case may be used.

In the case of using a wooden crate, internal padding is provided using shock absorbing white styro foam of different thickness to insure tight packing

CELL STRING PACKING

The strings will be packed into a hard plastic container or a carved wood container depending on the size or availability, in any case the string container is hard, the strings packed inside with foam filling any voids inside the container, also a RH protection bag is added.
